PAY STATIONS
ARE
PROFIT MAKERS

No. 201 and 203—Height, 7½ inch. Width, 3½ inch.
No. 205—Height, 8 inch Width, 6⅝ inch.

FOR SALE BY

NATIONAL TELEPHONE SPECIALTY CO.

157-159 S. CANAL STREET
CHICAGO

CHICAGO PAY STATIONS

are the highest type of apparatus of this character yet offered for sale. These machines have but to be examined critically for anyone to realize that every feature has been designed and manufactured by mechanical experts.

Each part is made of the very best materials and in the most careful manner, and every improvement which experience or ingenuity suggests is adopted.

The use of Pay Stations is an essential feature to profitable public telephone service, as there is no more reason why telephone service should be given gratis, than merchandise. The "telephone habit" is one easily cultivated and by locating pay telephones liberally in populous districts the telephone manager will be surprised at the fine revenue which each one of them will bring in.

Your particular attention is called to the detailed description of Chicago Pay Stations given on the next page, and we ask that you especially note the unique points which give them exceptional value.

DESCRIPTION
OF
CHICAGO PAY STATIONS

CASE—Case is cast in one piece from soft grey iron, is strongly constructed and handsomely finished.

SIGNALS—The signals are loud and unmistakeable. A muffler on the five cent signal shuts off the gong tone as soon as the lever returns and thus saves about five seconds time to the patron.

OPERATION—The method of operating Chicago Pay Stations is so apparent that the directions on the front are hardly necessary.

DURABILITY—Being strongly constructed of the very best materials and put together by competent mechanics, and also owing to the fact that the construction is very simple, there is but little liability that Chicago Pay Stations will get out of order.

SECURITY—The cash drawer, as will be seen from the illustration, fits snugly into the case, flush with the front, and cannot be pried open. The combination lock cannot be operated without a knowledge of the combination.

REJECTOR POCKET—Coins deposited in the wrong slot by mistake are immediately thrown out into the rejector pocket at the side of the machine.
